Russian (native) · English (C1, fluent in professional settings) · Serbian (B2)

Summary

Technical writer for internal systems, platforms and APIs, used to running documentation projects end to end, from a blank page to ongoing updates. Came from journalism and PR, and brought over the core of it: interviewing developers and SMEs, independent research, and writing for readers from engineers to support and marketing teams. Uses AI tools daily for drafting and research. Comfortable in a docs-as-code workflow: git, Markdown, Hugo, MkDocs, API references, pull requests and reviews.

Skills

Documentation tooling: Git (Stash, GitLab), Markdown, VS Code, Hugo, MkDocs, Confluence, Jira, HTML/CSS

Formats and standards: OpenAPI/Swagger (widget-based reference implementation, hands-on JSON editing), API client tools (Postman/Bruno), RapiDoc, documentation style guides, diagrams (flowcharts, UML, PlantUML)

Domain: API documentation, integration guides, knowledge bases, user guides, AI-assisted documentation workflows, docs-as-code publishing pipelines (Jenkins/GitLab), multilingual content governance

Experience

Wargaming | Belgrade

Technical Writer | Apr 2023 – Sep 2026

Technical writer combining close collaboration in a two-person team with independent ownership of standalone projects, working directly with subject-matter experts across engineering, content, support, live-ops, marketing, plus ad hoc requests from other departments. Worked in a docs-as-code environment: git (Stash for documentation, GitLab for engineering repos and Jenkins-triggered publishing pipelines), Hugo, and MkDocs.

- Co-owned documentation for the company's central platform (the shared commercial, account management, distribution, support, ban, compliance, community-management, communications, and analytics layer behind every game), several hundred pages split between integration and live-ops content, for a fully internal audience of studios, integration managers, support, live-ops, and marketing. Kept it current against an unpredictable release cadence (a few small feature updates most weeks, larger ones periodically), and helped drive documentation-quality work on it: navigation, tagging, style linting, broken-link checks.
- Wrote documentation for the company's internal monitoring-as-code platform from scratch by interviewing engineers and a project manager and independently tracing undocumented dependencies (e.g. which CMDB entity a given alert field came from) where no usable prior documentation existed.
- Owned the company's multilingual documentation style guide end to end: added new language sections in coordination with LQA vendors, and updated regional standards after gathering input from external vendors.
- Contributed directly to API reference documentation in engineering repositories, submitting pull requests to correct method and response-code descriptions, and hand-authored customized JSONs where a live API spec wasn't accessible (e.g. for an external partner-facing site behind a whitelist).
- Took on one-off documentation requests from other departments, e.g. a CMS user guide for Content, a knowledge base audit for Help Desk, or new feature documentation for the tank editor.
- Reviewed documentation pull requests, both within the writing team and from engineers submitting changes directly, and walked through documented user flows step by step while writing instructions, catching and

reporting incomplete or incorrect steps to development teams. Occasionally took primary QA ownership of in-development widgets for player-facing portal publications. ### Earlier experience | 2012 – 2022

Interfax News Agency, Head of Digital Information Group (2021–2022): built a digital economy/technology news vertical and its Telegram channel from scratch, with two direct reports.

National Priorities NPO, Head of Communications for the Digital Economy and Entrepreneurship initiatives (2020–2021): coordinated communications across TV, radio, print, and digital/social media, working directly with subject-matter experts, stakeholders, and officials.

Kommersant, Journalist (2017–2020): articles and interviews on technology, digital economy regulation, and antitrust regulation.

Earlier editorial roles (2012–2020): RBC+, Plus One, CoinFox.info, BFM.ru.

Education

Moscow State University, History, Honours Degree, 2011

Professional Development

Business Analysis coursework (UpSkillMe/EPAM, 2022): user stories, UML and BPMN diagrams, requirements elicitation techniques

Business English, BEC Higher (Alibra School, 2023)
